Accura Precision nylon cantilever rollers now available for square tube frame gates and posts

Huntington Beach, Calif. — Larsen Innovations announced new additions to their Accura™ Precision cantilever hardware line. In addition to their nylon rollers for round gate frames and posts the company indicates that it now offers external nylon cantilever rollers for 2" square gate frames on 4" square posts.

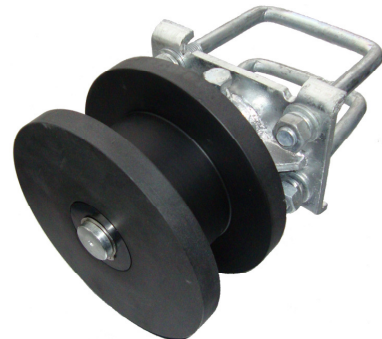

Company president, Charlie Larsen commented, "As with our round frame rollers, the new square frame and square post rollers come packaged as a set with 4 rollers complete with covers and our roller guards. This saves time during installation because the installer has everything in a single box to hang the gate. Since the covers are pre-installed you know that they get used in every case. Our roller guard feature protects the gate from striking the roller or cover, which is a major cause of system failure when the gate knocks the roller out of alignment. This is a common problem on manually operated gates"

"The elements of the different sizes and styles of rollers are designed to be interchangeable. For example the contractor could trade a round frame roller on to a square frame bracket to adapt to unusual applications" Larsen stated.

Larsen Innovations brings more than 30 years experience in the fence industry and offers temporary fence systems and kennels based upon their proprietary panel design as well as other specialty items such as cantilever hardware for the fence industry.
